1. Statement			
Novelty (N)	Claims	1-23	YES
	Claims		NO
Inventive step (IS)	Claims	1-23	YES

2. Citations and explanations (Rule 70.7)			
1 This report makes reference to the following document:			
D1: US 2002/184495 A1 (TORII MIKIO ET AL) 5 December 2002 (2002-12-05)			
2 The phrase "stored <u>independently</u> of the data" in claims 1 and 17 is unclear and leaves the reader uncertain as to the meaning of the technical feature in question. As a result, the subject matter of said claims is unclear (PCT Article 6).			
Hereinafter, said phrase is interpreted in line with page 5, lines 28-32 of the description and with claim 3 to mean "stored in a volatile memory".			
3 INDEPENDENT CLAIMS 1, 17			
3.1 Document D1 is considered the prior art closest to the subject matter of claim 1 and discloses (the references between parentheses refer to that document):

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	<p>a method for printing sensitive data, comprising the following steps:</p> <ul style="list-style-type: none">- encoding at the workstation (host apparatus B) sensitive data to be printed ;- transferring the sensitive data to be printed to a printing device;- decoding the sensitive data to be printed ([0044]);- converting the data to be printed into control signals (implicit) for actuating a printing unit (image forming section 70);- printing the data onto a recording medium ([0087]). <p>3.2 The subject matter of claim 1 is novel (PCT Article 33(2)) and differs from the method known from D1 in that in claim 1 the encoded data is stored in a non-volatile memory between the encoding and the printing stages, the data being divided between a plurality of memory segments and the associations thereof being stored in a volatile memory.</p> <p>3.3 The present invention can therefore be considered to address the problem of protecting the encoded data before it is printed.</p> <p>3.4 This is achieved using the solution proposed in the application, in that an attacker requires access to both data carriers in order to be able to read the data. The data is protected from a physical attack, for example from the removal of</p>

	<p>the data carrier, in that the data is not accessible without the segment associations. In the event of a power failure, the association of the data is lost, thereby preventing access to the data. This solution has the additional advantage of using fewer volatile memories than solutions in which the data is stored in a volatile memory and is therefore also more cost-effective.</p> <p>3.5 The combination of features contained in claim 1 is neither disclosed nor suggested by the available prior art.</p> <p>The solution proposed in claim 1 therefore involves an inventive step (PCT Article 33(3)).</p> <p>3.6 The same reasoning applies to independent claim 17. The subject matter of claim 17 is thus novel and involves an inventive step.</p> <p>4 DEPENDENT CLAIMS 2-16, 18-23</p> <p>4.1 Claims 2-16 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.</p> <p>4.2 Claims 18-23 are dependent on claim 17 and therefore likewise meet the PCT requirements for novelty and inventive step.</p>
